1920 CENSUS INDEX
DEPARTMENT OF COMMERCE
BUREAU OF THE CENSUS

19. **Answer: D** — The patient is a 40-year-old male with a 10-year history of type 2 diabetes mellitus. He has been taking insulin for the past 5 years. His current HbA1c is 8.5%. He is currently taking 10 units of insulin glargine at bedtime and 10 units of insulin lispro before meals. He has been experiencing frequent hypoglycemic episodes, particularly at night. The most likely cause of his hypoglycemia is an increase in insulin sensitivity due to the long-term use of insulin. The other options are less likely: A) Insulin resistance would lead to hyperglycemia, not hypoglycemia. B) Decreased insulin secretion would also lead to hyperglycemia. C) Increased insulin secretion would lead to hypoglycemia, but this is not a common complication of long-term insulin use. E) Decreased insulin sensitivity would lead to hyperglycemia.

Abstract—The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were 12 women, 40 to 50 years of age, who were sedentary and had no cardiovascular or pulmonary disease. The subjects were randomly assigned to a 12-week training program or a control group. The training program consisted of three sessions per week of 30 minutes of moderate-intensity aerobic exercise. The control group consisted of 12 women who did not exercise. The HR and EE were measured at rest and during exercise at the beginning and end of the 12-week period. The results showed that the training program had a significant effect on the HR and EE of the subjects. The HR at rest decreased significantly from 72 to 68 beats per minute (p < 0.05). The HR during exercise decreased significantly from 148 to 142 beats per minute (p < 0.05). The EE at rest decreased significantly from 1,200 to 1,100 kcal per day (p < 0.05). The EE during exercise decreased significantly from 1,800 to 1,700 kcal per day (p < 0.05). The results of this study suggest that a 12-week training program can improve the HR and EE of sedentary, middle-aged women.
